

WiFi

With a reputation built over time, and a specialist team with decades of experience, RTCommunications has developed strong capabilities in the survey, design and installation of innovative, efficient and effective Wi-Fi solutions. From entry-level wireless for small business, to mission critical coverage for thousands of locations, RTCommunications is expert in the deployment of enterprise Wi-Fi solutions for both indoor and outdoor settings.

WHAT WE DO

Using the latest technology and software from AirMagnet, RTCommunications' survey and design team will deliver efficient and scientifically accurate site surveys for any indoor and outdoor wireless network.

OUR CAPABILITIES

RTCommunications can:

- Design and deploy wireless LANs for optimal performance, security and compliance
- Collect real-world data by performing true end user experience measurements (WLAN throughput, data rates, retries, losses)
- Perform simultaneous spectrum analysis in a single walk through, minimising expensive wireless LAN performance impact, due to RF interference sources
- Simulate 'what if' scenarios to prevent or minimise costly repeat survey walks
- Certify the network for any design and application requirements using customer ready pass/fail assessment reports
- Produce custom reports enabling efficient handover of results based on WLAN design and application requirements

Contact us to find out how RTCommunications can help with your Wi-Fi project.
